

	Arm 1 Local Matches	Arm 2 MHP Pathways Hub
Summary	Each participating clinic location will have a designated "matched" food organization providing healthy food and nutrition education. The food organization may opt to distribute food at the matched clinic.	The Pathways Hub model is a community-based care coordination approach where referrals to community social service agencies originate from a care coordination center called a hub. The clinical care manager completes an assessment and collects social determinants data. MHP staff follows up with referral and resource information.
Pros	<ul style="list-style-type: none"> • Big net global screening may catch folks in need that aren't in the lowest 5%, • high local clinic engagement • clinic staff practicing screening for SDHs • normalizes the conversation about health and hunger in clinic 	<ul style="list-style-type: none"> • Small targeted net will mean higher percentage of positive screens for effort • Efficiency • consistency • pathway model ensures follow-up • conversation is about SDHs with neutral 3rd party
Level	Individual Clinics (Local)	ACO (System)
Screen location	Clinic	Clinic
Population Screened	Global - all patients	Subset of patients (the 5% currently being identified for SDH resources)
Follow-up Conducted by	Clinic Staff	MHP Staff
